

CLAIMS

1. A self-deployable tent comprising:
 - a hoop structure comprising a base loop (2) and at least one top loop (3); and
 - 5 · a roof sheet (5) secured to the base loop (2) and the top loop (3),the tent being characterized in that:
 - a) it further comprises an inside chamber (6) disposed beneath the roof sheet (5), said chamber (6) having a top portion (6a) secured to the top loop (3) via flexible spacer means (8), and a bottom portion (6b) secured to the base loop (2); and
 - 10 b) in the deployed position, the tension of the roof sheet (5) and the inside chamber (6) is such that they are held apart from each other by the spacer means (8).
 - 15
2. A self-deployable tent according to claim 1, characterized in that the bottom portion of the roof sheet (5) includes two opposite openings (10) for inlet and outlet of air flowing in a ventilation space (9) between the roof sheet (5) and the inside chamber (6).
- 20
3. A self-deployable tent according to claim 2, characterized in that each of the two opposite openings (14) is formed in the inside region of a top loop (3) close to the base loop (2).
- 25
4. A self-deployable tent according to any one of claims 1 to 3, characterized in that the bottom portion (6b) of the chamber constitutes the ground sheet of the tent.
- 30
5. A self-deployable tent according to any one of claims 1 to 3, characterized in that it includes a ground sheet (2) that is independent from the bottom portion (6b) of the inside chamber (6), and in particular that is secured to the base loop, or to the roof sheet, or to the chamber.
- 35

6. A self-deployable tent according to any one of claims 1 to 5, characterized in that it includes sheaths (7) fixed on or integrated in the outside face of the roof sheet (5) to pass the top loop (3), and in that the flexible spacer means (8) are secured to the inside face of the roof sheet (5) at or close to said sheaths (7).

7. A self-deployable tent according to any preceding claim, characterized in that the flexible spacer means are releasable fasteners (10, 12), and in that the inside face of the roof sheet and the outside face of the inside chamber carry fastener elements (11, 13) for fastening said fasteners.

8. A self-deployable tent according to any preceding claim, characterized in that it includes adjuster means for adjusting the width (L) of the tent, extending between two opposite zones both of the base loop (2) and of the top loop (3), beneath the bottom portion (6b) of the inside chamber (6).
